Prerequisites(module installed previously)

If you have previously installed this module on your store using **Magelnn** Extension then you need to follow the steps below in order to install it again on your site. You will need to remove the module first then proceed with the installation steps in the next section.

Module Installed via Composer

If the module was installed previously via composer then run the commands below to remove it completely:-

```
// disable the module php bin/magento module:disable Mageinn_DiamondSearch

//remove the module composer remove mageinn/module-diamondsearch

//run upgrade commands
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

Module Installed by placing files in app/code

If the module was previously installed by placing extension files in app/code then simply go the following directory `app/code/MageInn/` and remove the **DiamondSearch** folder completely then run the upgrade commands as shown below:-

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

Installation

- **Installation via app/code:** Upload the content of the module to your root folder. This will not overwrite the existing Magento folder or files, only the new contents will be added. After the successful upload of the package, run below commands on Magento 2 root directory.

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

- **Installation via Composer:** Please follow the guide provided in the below link to complete the installation via composer.

<https://docs.scommerce-mage.com/magento-2-extensions/installation-via-composer/installation-via-composer>

Configuration Settings for Diamond Search

Go to *Admin > Stores > Configuration > Scommerce > Diamond Search*

General Settings

- **Enable Module** - Select "Yes" or "No" to enable or disable the module.
- **License Key** - Please add the license for the extension which is provided in the order confirmation email. Please note license keys are site URL specific. If you require license keys for dev/staging sites then please email us at support@sccommerce-mage.com.
- **Source:-** Select the source from where the products are pulled. Rapnet/Demo pulls products via Rapnet API where Rapnet is live. "Local" pulls products from Magento.
- **API Key (RapNet):-** Enter the API key provided by RapNet here. •
<http://technet.rapaport.com/ProgrammaticAccess/Keys.aspx> **The following key works only "localhost" domain: 8EC95570ABE6411290197CB28845A6FF**
Please note - "localhost" means domain. Not IP- address like "127.0.0.1", not other domain matched to local IP, "localhost" means domain. So this test API-key used only for local site running via "<http://localhost>". Not for "<http://127.0.0.1>", not for "<http://my-domain-resolved-to-local-ip.tld>", only for "<http://localhost>"
- **Theme Color:-** Enter the color code for the entire diamond search theme
- **Diamond Image Type:-** Choose between two image types schematic or photo for diamonds that appear in the list
- **Settings Attribute Set:-** Attribute Set used to select products on Settings step(step 2) in Ring Builder (eg:- something like "Rings"). If you are creating a custom attribute set for rings then include critical **Settings** attributes which are **Shape, Size from, and Size To**, and these attributes must have values against them for everything to work correctly on the front end as these values get used to select the correct Ring.
- **Diamond Search Category:-** Diamond Search Category used to show Settings on Step 2(choose a setting)
- **Show Dropdown filters:-** If set then filters will be dropdowned. If not set then filters will be always displayed

Custom Sizes added to bundle product on the fly

Integration Modes

The extension comes with two integration modes:- Local and RapNet.

Local

When mode is set to local you can create your diamond products directly from Magento admin. All you need to do is to assign "Diamonds" attribute set to your diamond products

RapNet

RapNet brings millions of dollars in diamond product to your Magento store, without the cost of owning the physical diamonds. All diamonds and attributes should be configured directly from RapNet admin panel. RapNet provides data and pricing in real time. Once the customer places the order using the ring builder the product gets automatically created in Magento catalog.

<https://www.rapnet.com/>

Custom Attribute Set

By default, the module adds two attribute sets i.e. Settings and Diamonds. These contain essential attributes for the module to work. If you want to create a custom attribute set, you need to include the attributes from these existing sets in order for your custom attribute set to work properly and the functional flow to be correct. We will go through each of these attribute sets and the attributes contained within them.

Settings

If you want to use a custom attribute set for "Rings" aside from settings then include critical **Settings** attributes which are **Shape, Size from and Size To** and these attributes must have values against them for everything to work correctly on frontend as these values get used to select correct Ring. All the attributes included in this attribute set are as follows:-

- ds_size_min
- ds_size_max
- ds_shape
- ds_is_paired

Rings

All the attributes included in this attribute set are as follows:-

- mdiamond_id
- mshape
- msize
- mcolor
- mfancy_color_dominant_color
- mfancy_color_secondary_color
- mfancy_color_overtone
- mfancy_color_intensity
- mclarity
- mcut
- msymmetry
- mpolice
- mdepth_percent
- mtable_percent
- mmeas_length
- mmeas_width
- mmeas_depth
- mgirdle_min
- mgirdle_max
- mgirdle_condition
- mculet_size
- mculet_condition
- mfluor_color
- mfluor_intensity
- mhas_cert_file
- mcountry
- mcity
- mlab
- mtotal_purchase_price

- mtotal_sales_price
- mcurrency_code
- mcurrency_symbol
- mtotal_sales_price_in_currency
- mcert_num
- mstock_num
- mhas_sarineloupe
- msarineloupe_url
- mis_fancyColor
- ds_is_paired
- mis_lab_diamond

Ring Builder

Ring Builder is a great tool to allow your customers to pair any diamond with setting of their choice. Ring builder is fully responsive. You can also define a filter for each setting, so that only compatible diamonds are shown when setting is selected.

The entire process is divided into three steps namely, choosing a diamond, choosing a ring and in the final step a bundled product is created using previous selections and customers can place an order with that product.

Note:- Customers can start by either choosing a diamond first or choosing a setting(ring) first they will automatically be redirected to the next step.

Choosing a Diamond

If customers chooses to start by selecting a diamond then they will be able to see the diamond search page as shown in the image below. It contains several filters which can be utilized to pinpoint the exact diamond as per requirements.

1 CHOOSE A DIAMOND

3. [Noths Order\(s\) View from Back-end](#)
 - *Noths Order Import*
 - *Noths Order Details on Order View Page*
 - *Noths Order Logs*

Installation

- **Installation via app/code:** Upload the content of the module to your root folder. This will not overwrite the existing Magento folder or files, only the new contents will be added. After the successful upload of the package, run below commands on Magento 2 root directory.

```
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy
```

- **Installation via Composer:** Please follow the guide provided in the below link to complete the installation via composer.

Configuration Settings for Noths Integration

Go to **Admin > Stores > Configuration > Scommerce Configuration > Noths**

General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module.
- **License Key** - Please add the license for the extension which is provided in the order confirmation email. Please note license keys are site URL specific. If you require license keys for dev/staging sites then please email us at support@sccommerce-mage.com.

General Settings

The screenshot shows the 'General Settings' section for the Noths module. It features two main configuration fields:

- Enabled [store view]:** A dropdown menu currently set to 'Yes'. Below it, a note states: 'This setting will be used to enable or disable module'. A callout box points to this field with the instruction: 'Select "Yes" to enable the module'.
- License Key [store view]:** A text input field containing the license key: '\$2y\$10\$kw8Nr72W.RXLb5JgstqN8uEhu8IVbr4185RveZ'. Below it, a note states: 'This setting will be used to verify your license key for the give domain'. A callout box points to this field with the instruction: 'Enter the license key for the module'.

Below the License Key field, there is a red note: 'N.B. License keys are domain specific so for your testing or staging sites please email us at core@sccommerce-mage.com'.

Integration Settings

- **Cron for Order import** - Please allow to set cron frequency for order import from Noths.
- **API Url** - Please enter API Url.
- **API Log** - Select "Yes" to enable the API Log. If set to "Yes" then it will log communication with Noths API.
- **Create Files for Log** - Select "Yes" to enable the create files for log. If set to "Yes" then it will log communication with Noths API.
- **API Key** - Please enter API Key.
- **Select the allowed order statuses** - Please select order status which will be imported from Noths

Installation

- **Installation via app/code:** Upload the content of the module to your root folder. This will not overwrite the existing Magento folder or files, only the new contents will be added.

After the successful upload of the package, run below commands on Magento 2 root directory.

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

- **Installation via Composer:** Please follow the guide provided in the below link to complete the installation via composer.

<https://docs.scommerce-mage.com/magento-2-extensions/installation-via-composer/installation-via-composer>

Configuration Settings for Creditsafe Integration

Go to *Admin > Stores > Configuration > Scommerce > Credit Safe*

General Settings

- **Enable Module** - Select "Yes" or "No" to enable or disable the module.
- **License Key** - Please add the license for the extension which is provided in the order confirmation email. Please note license keys are site URL specific. If you require license keys for dev/staging sites then please email us at support@sccommerce-mage.com.
- **Show Address Form on Registration** - Set "Yes" to collect billing address from customer on user registration or signup form. If set "No" billing address won't be captured on user registration.
- **Archiving Log** - Set "Yes" to archive credit safe logs after a certain number of days and set "No" to turn off archiving.
- **Archive Log After Number Of Days** - Enter the number of days after which the logs will be archived.

Enable/Disable API logging in DB

Limits and Messages Configuration

Create creditsafe rules based on your requirements.

- **Type** - Select the user type either "Business" or "Consumer" this rule will be created for the appropriate applicant type.
- **CS Credit Limit/Score Range** - Enter the credit limit or credit score range for the particular rule.
- **Limit**- Enter the credit limit to be assigned for this rule based on the score entered previously. If the score is in this range then the entered limit should be provided to the applicant.
- ****Limit Type -****There are two main credit limit types:
 - **Absolute Limit:** This limit is a fixed amount set by you or your business, regardless of external factors. It's directly entered into the "limit field" you mentioned.
 - **Percentage Limit:** This limit is determined as a percentage of an external creditworthiness score. The external score typically comes from CreditSafe.
 - **The calculation involves:** Credit Limit Received from CreditSafe (e.g., 1000) Limit Specified in the Limit Field (e.g., 50) The final credit limit is the percentage of the CreditSafe limit multiplied by the limit field value. In this example: Final Limit = 50% * 1000 = 500
- **Response** - Enter the response shown to the customer when they fulfill the criteria for this rule and the the limit is assigned to them
- **Response Type** - Choose the response type from either Success or Failure.

Similarly you can create multiple rules as per your requirements to appropriately assign the credit limits to your applicants.

Limits and Messages Configuration

Type	CS Credit Limit / Score Range	Limit	Limit Type	Response	Response Type	Action
<input checked="" type="checkbox"/> Business <input type="checkbox"/> Consumer	<input type="text"/>	<input type="text"/>	Abso <input type="button" value="v"/>	<input type="text"/>	Succi <input type="button" value="v"/>	

Limits Rules configuration. Please note "Percent" type is only applicable to "Business" type. **Important!** Please make sure you've created correct ranges for each type. Range "1000-10000" means ≥ 1000 and < 10000

- First Range must include 0 or be empty to start from 0. Ex. "-1000"
- Last Range must be empty to include all great values. Ex. "10000-"
- Intermediate ranges should include neighbour limits. Ex. "1000-10000"

For credit limit substitution `{{limit}}` variable could be used

Limits Configuration

- **Credit Applied Message** - Enter the message that will be displayed to user when they have previously applied for Creditsafe application.

Limits Configuration

Credit Applied Message
[global]

You already applied for CreditSafe applicatic

Message showing to user when CreditSafe application is already done

Emails

- **Enable Email** - Select "Yes" or "No" to enable or disable the creditsafe application emails.
- **Success Email Template** - Select the template to be used for success emails (successful credit safe application).
- **Success Email Sender** - Select the Email Sender, the email to be used to send the success emails.
- **Success Email Recipient** - You can add an additional email where the success emails will be sent alongside the applicant.

- **Fail Email Template** - Select the template to be used for fail emails (failed credit safe application). This email will only be sent to the customer.
- **Fail Email Sender** - Select the Email Sender, the email to be used to send the failure emails.
- **Fail Email Recipient** - This is optional. You can add an additional email where the failure emails will be sent other than the customer. This email will be exactly same as the one sent to the customer.
- **Admin Fail Email Template** - Select the template to be used for fail emails (failed credit safe application) to admin. This email template is only sent to the Administrator and not the customer. It contains for details regarding the failure of the credit application.
- **Admin Fail Email Sender** - Select the Email Sender, the email to be used to send the failure emails to admin.
- **Admin Fail Email Recipient** - This is optional. You can add an additional email where the failure emails will be sent alongside the admin. This failure email will be exactly same as the one sent to administrator.
- **Admin API Result Email Template** - Select the template to be used for API results to admin. When the credit application occurs the requests and responses from various end points will be sent to the admin via this email template.
- **Admin API Result Email Sender** - Select the Email Sender, the email to be used to send API results to admin.
- **Admin API Result Email Recipient** - This is optional You can add an additional email where the API results will be sent alongside the admin. This email will be exactly same as the one sent to administrator containing requests and responses of various end points hit during the credit application.

Customer Configuration

- **Approval Type** - Select either "disabled" "manual" or "automatic". If "disabled" is selected, the verification will be disabled. If "manual" is selected, the creditsafe applications will be only approved/verified by the magento admin. If "automatic" is selected, the creditsafe applications will be automatically approved or denied based on the Credit limits and Messages Configuration.
- **Allow customers to retry** - If set to "Yes", customers will be able to re-apply for creditsafe application. If set to "No", once creditsafe application is submitted they won't be able to retry the application.
- **Maximum number of retry allowed:-** Enter the maximum number of retries for customers to check their credit limit.
- **Email Sender** - Select the email sender which will be used to send out applicant verification emails
- **Verification Success Email Template** - Select the Email template to be used for successfull applicant verification.
- **Verification Rejected Email Template** - Select the Email template to be used for failed applicant verification.
- **Success Credit Limit message (not verified):-** Enter the success credit limit message when credit check was successfull but not verified.
- **Success Credit Limit message (verified):-** Enter the success credit limit message when credit check was successfull and verified.
- **Failed Credit Limit Message** - Enter the message that will be displayed to customer when their credit check failedbut they have retries available.
- **Failed Credit Limit (no retries)** - Enter the message that will be displayed to customer when their credit check failed and they have no retries available.

CreditSafe Information Stored Against the Customer

Our module adds certain fields against the customer to keep track of credit assignment and available credit limits. Following fields are added:-

- **CreditSafe Credit Reference:-** Credit reference number received from creditsafe upon credit application.
- **Credit Limit:-** The limit received from creditsafe upon successful credit application. Maximum limit that can be used by the customer to make purchases. It does not decrease after transactions.
- **Credit Balance:-** The limit received from creditsafe upon successful credit application. Maximum limit that can be used by the customer to make purchases. This value gets updated based on transactions made by the customer. for eg:- if they make purchase using the credit limit then that amount will be deducted and reflected here.
- **Credit Limit Verified:-** This toggle turns on when the customer verification is complete, either manual or automatic.
- **Credit Limit Retry Count:-** The number of times a customer has applied for credit application.

Customer Verification Process

Based on the "Approval Type" configuration described earlier, the customer's verification takes place:-

- **Automatic:-** The customer verification is done automatically.
- **Manual:-** When "manual" verification is selected, then it is upon the administrator to verify the customer, for eg:- asking for documents via email and verifying them in person. Once verified admin can click on the verify button or turn on the toggle in the customer page (go to **Admin>Customers>All Customers>select the customer**). Once verified by using the "Verify" button, the customer get an email regarding their successful verification.

CreditSafe Adjustment Grid

CreditSafe Transactions Grid

It allows you to track and manage adjustments made to customer credit limits based on their orders and payments. With this system, you can view and manage adjustments made to customer credit limits in a single, easy-to-use grid. Easily Keep track of adjustments made to customer credit limits. Go to **Admin>Sales>Creditsafe>Transactions**. The grid reflects both positive and negative adjustments i.e when a customer makes a purchase using their credit limit and when they make the payment of the invoice.

Import CreditSafe transactions in the Grid

You can import transactions by either going into Admin>System>Import or by going to sales>Orders>Import from CSV. Next select the "Entity Type" as "CreditSafe Transaction Import" from the dropdown.

The format of the import file should be as shown in the image. The fields required are as follows:-

- **entity_id:-** Enter the id of the next transaction as per your CreditSafe Transaction Grid. For eg:- if you have 1-24 transactions then you should start the list from 25..26 and so on.
- **payment_date:-** Date & time of the payment received or deducted.
- **adjustment_amount:-** Enter a positive or negative adjustment amount. adding a positive amount will add the amount in the customers credit balance whereas for negative amount it will deduct the amount from credit balance.
- **increment_id:-** Enter the order id.
- **customer_email:-** Enter the customer email.
- **transaction_description:-** You can add a description of the adjustment which will be reflected in the creditsafe transactions grid.

	A	B	C	D	E	F
1	entity_id	payment_date	adjustment_amount	increment_id	customer_email	transaction_description
2	1	01-01-1970 00:00	100	10000059	user@mail.com	Positive adjustment of 100
3	2	01-02-1970 00:00	-100	10000061	user@mail.com	Negative adjustment of 100

Managing PunchOut Clients

This is the most critical part of the setup. Each corporate client you wish to integrate with must be configured as a "PunchOut Client."

1. Go to **Admin>Customers>Punchout>Manage Punchout Clients**

2. Click **"Add New Punchout Client"** to configure a new connection.

Manage Punchout Clients 🔍 🔔 👤 support-1474

ID	ERP Identifier	Customer Group	Website	Is Active	Created At	Updated At	Action
1	Unit4	General	Main Website	Yes	2025-06-27 15:19:29	2025-07-01 12:19:32	Select

3. Fill in the following fields:

- **General Information**

- **ERP Identifier:** The unique identifier provided by the client's ERP system. This is often referred to as the `From Identity` or `Sender Identity` in cXML.
- **Shared Secret:** The password or secret key used for authentication, provided by your client. This must be an exact match.
- **Customer Group:** This is the key to personalizing the experience. Select the Magento customer group that this client's users should be assigned to upon logging in via PunchOut. This controls the catalog and pricing they see.

- **Website:** Select Website
- **Is Active:** Set to "Yes" to activate the connection for this specific client.
- **UBL Information**
 - **Scheme ID:-** Select the Scheme ID
 - **Endpoint ID:-** Add the Endpoint ID

4. Click "**Save Config.**"

Setting Up Catalogs and Pricing

The extension leverages Magento's native customer group functionality to deliver a personalized experience.

1. **Create a Customer Group:** Before configuring a PunchOut client, navigate to **Customers > Customer Groups** and create a new group for them (e.g., "PunchOut - Global Office Inc.").
2. **Assign Custom Pricing:** Use **Marketing > Catalog Price Rules** to create rules that apply specific discounts or fixed prices for products and assign the rule to the customer group you just created.
3. **Restrict Catalog (Optional):** If you need to show only specific categories to a client, you may need to use native Magento functionality or a third-party category permissions module to restrict access for the designated customer group.

Testing the Integration

Our extension adheres strictly to industry standards, allowing you to validate your configuration using independent, third-party testing tools. We recommend using the **PunchOut Commerce cXML Order Tester**.

Step-by-Step Testing Guide:

1. **Get Your PunchOut URL:** Your Magento PunchOut URL is typically your store's base URL followed by `/scpunchout/create/session/`. For example: `https://yourstore.com/scpunchout/create/session`
2. **Open the Testing Tool:** Navigate to `https://punchoutcommerce.com/tools/cxml-order-tester`.
3. **Configure the Tester:**
 - **PunchOut Login URL:** Enter your Magento PunchOut URL from Step 1.
 - **cXML Payload:** The tool provides a template. You must edit the `Identity` and `SharedSecret` values in the XML to **exactly match** the credentials you configured for your PunchOut Client in the Magento admin.
 - **UBL Payload:** The tool provides a template. You must edit the `Username`, `password` and `Endpoint ID` values in the XML to **exactly match** the credentials you configured for your PunchOut Client in the Magento admin.
4. **Initiate the Session:** Click the "Start Session" button on the tester website to test CXL and "Start UBL Session" to test the UBL2.1
5. **Shop in Magento:** You should be redirected to your Magento storefront and automatically logged in as a member of the mapped customer group. Browse the site and verify that you see the correct products and contract pricing. Add one or more items to your basket.
6. **Transfer the Cart:** Once you have items in your basket, click the "**Transfer to ERP**" button.
7. **Verify the Response:** You will be redirected back to the PunchOut Commerce testing tool. It will now display the **cXML response** sent from your Magento store. Carefully inspect this XML to confirm that the correct SKUs, quantities, and prices are present. A successful test confirms your configuration is working correctly. You can validate the UBL output at:- <https://ecosio.com/en/peppol-and-xml-document-validator/>

Handling Purchase Orders (End-to-End Workflow)

The PunchOut process is typically two-phased.

- **Phase 1 (Shopping):** The buyer transfers their cart from Magento to their ERP for internal approval. This is what you validated during testing.

Bags

Introducing the Ultimate Collection of Bags: Elevate Your Style and Convenience Welcome to our carefully curated collection of bag affordability. Our extensive range of bags offers something for everyone, whether you're looking for a chic handbag, a spacious tote bag, or a rugged backpack. Discover the perfect bag to complement your outfit and lifestyle, with options suitable for work, travel, leisure, and everything in between. Sourcing the finest materials, we bring you an unparalleled selection of bags that are as practical as they are fashionable. From timeless designs to modern trends, our bags are designed to withstand the test of time and seamlessly integrate into your daily routine. Our commitment to quality means that each bag is made with precision and care, ensuring durability and longevity. With a focus on versatility and practicality, our bags are thoughtfully designed with ample storage space, adjustable straps, and multiple compartments, making them perfect companions for any occasion. Whether you're running errands, heading to the office, or embarking on a weekend getaway, our bags effortlessly carry your essentials. Browse our extensive collection of bags and discover the perfect accessory to elevate your style and functionality. From compact satchels to spacious totes, there's something for every taste and need. Shop with confidence, knowing that each bag is backed by our commitment to quality and customer satisfaction. Add the perfect finishing touch to any outfit with our collection of bags. Experience the perfect blend of style and functionality. Shop now and find the ideal bag to accompany you on all your adventures.

```

Our extension can receive this incoming Purchase Order and automatically create a corresponding sales order in your Magento system, enabling a fully automated, end-to-end workflow. The specific endpoint URL for receiving POs (`/scpunchout/order/`) should be provided to your client's IT team.

Troubleshooting Common Issues

- **Authentication Failed / Invalid Credentials:** This almost always means the **Identity** or **Shared Secret** in your PunchOut Client configuration does not match what is being sent by the ERP or testing tool. They are case-sensitive and must be an exact match.
- **User Sees Wrong Products or Pricing:** Verify that the PunchOut Client is mapped to the correct **Magento Customer Group**. Then, check the Catalog Price Rules and any category permissions assigned to that specific group.
- **Cart Transfer Fails or Returns an Error:** Check the Magento exception and system logs for detailed error messages. Common causes include products being out of stock or disabled.
- **Connection Timeouts:** Ensure your server's firewall allows incoming POST requests from your client's ERP system IP addresses or from the testing tools you are using.
