## Installation

- **Installation via app/code:** Upload the content of the module to your root folder. This will not overwrite the existing Magento folder or files, only the new contents will be added. After the successful upload of the package, run below commands on Magento 2 root directory.

```
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy
```

- **Installation via Composer:** Please follow the guide provided in the below link to complete the installation via composer.

<https://docs.scommerce-mage.com/magento-2-extensions/installation-via-composer/installation-via-composer>

## Configuration Settings for Optimiser Base

Go to *Admin > Stores > Configuration > Scommerce Configuration > Optimiser Base*

### General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module.
- **License Key** - Please add the license for the extension which is provided in the order confirmation email. Please note license keys are site URL specific. If you require license keys for dev/staging sites then please email us at [support@scommerce-mage.com](mailto:support@scommerce-mage.com).

### General Settings

**Enabled** [store view]  Select "Yes" to enable the module

This setting will enable or disable all modules related to optimisation. This includes **Image Optimiser**, **Lazy Loading**, **Cache Warmer** and **Google Speed Optimiser**

**License Key** [store view]  Enter the License key for the module

This setting will verify your license key for the give domain

**N.B. License keys are domain specific so for your testing or staging sites please email us at [core@scommerce-mage.com](mailto:core@scommerce-mage.com)**

# Configuration Settings for Speed Optimiser

Go to *Admin > Stores > Configuration > Scommerce Configuration > Speed Optimiser*

## General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module.

### General Settings

**Enabled** [store view]  Select "Yes" to enable the module

This setting will be used to enable or disable module

## Minify HTML

- **Enabled** - Select "Yes" or "No" to enable or disable the module. If set to "Yes" then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your HTML to reduce its size.
- **Defer Iframes** - Select "Yes" or "No". If set to "Yes" then attribute defer will be added to the iframe.

## Minify Html

**Enabled** [store view] Yes  Select "Yes" to enable the minify Html

With 'Yes/No' options to enable/disable the module. If set to 'Yes' then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your HTML to reduce its size.

**Defer iframes** [store view] No  Select "Yes" to enable the Defer iframes

With 'Yes/No' options. If set to 'Yes' then attribute 'defer' will add all the iframe.

## Javascript Settings

Select "Yes" to enable the Defer Iframes

- **Merge Javascript Files** - Select "Yes" or "No". If set to "Yes" then it will merge all JS files into one to reduce the number of queries.
- **Enable Javascript Bundling** - Select "Yes" or "No". If set to "Yes" then it will combine all JS files into few bundles and download them for each page. This will save time by reducing the number of server requests.
- **Javascript Files Minification** - Please select "Yes" or "No". If set to "Yes" then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your Java Script to reduce its size.

### Javascript Settings

**Merge JavaScript Files** [store view] Yes  Select "Yes" to merge the JavaScript files

With 'Yes/No' options. If set to 'Yes' then it will merge all JS files into one to reduce the number of queries.

**Enable JavaScript Bundling** [store view] Yes  Select "Yes" to enable the JavaScript Bundling

With 'Yes/No' options. If 'Yes' then it will combine all JS files into few bundles and download them for each page. This will save time by reducing the number of server requests.

**JavaScript Files Minification** [store view] Yes  Select "Yes" for JavaScript Files Minification

If set to 'Yes' then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your Java Script to reduce its size.

## CSS Settings

- **Merge CSS Files** - Select "Yes/No". If set to "Yes" then it will merge all CSS files into one to reduce the number of queries.
- **Defer Fonts Loading** - Select "Yes/No". If set to "Yes" then browser will load the page with system fonts and replace them with your fonts when they are loaded. It makes store pages load faster.
- **Fonts Display Swap** - Select "Yes/No". If set to "Yes" then font-display will be replaced with swap. Helps avoid Luma-Icons issue.
- **CSS Files Minification** - Select "Yes" or "No". If set to "Yes" then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your CSS to reduce its size.

## CSS Settings

<b>Merge CSS Files</b> <small>[store view]</small>	<input type="text" value="Yes"/>	Select "Yes" to Merge the CSS files
<small>With 'Yes/No' options. If set to 'Yes' then it will merge all CSS files into one to reduce the number of queries.</small>		
<b>Defer Fonts Loading</b> <small>[store view]</small>	<input type="text" value="Yes"/>	Select "Yes" for Defer Fonts Loading
<small>With 'Yes/No' options. If set to 'Yes' then browser will load the page with system fonts and replace them with your fonts when they are loaded. It makes store pages load faster.</small>		
<b>Fonts Display Swap</b> <small>[store view]</small>	<input type="text" value="Yes"/>	Select "Yes" for Fonts Display Swaps
<small>With 'Yes/No' options. If set to 'Yes' then font-display will be replaced with swap. Helps avoid Luma-Icons issue</small>		
<b>CSS Files Minification</b> <small>[store view]</small>	<input type="text" value="Yes"/>	Select "Yes" for CSS Files Minification
<small>With 'Yes/No' options. If set to 'Yes' then the module will remove all the unnecessary comments, line breaks, tabs and spaces from your CSS to reduce its size.</small>		

# Configuration Settings for Lazy Loading

Go to *Admin > Stores > Configuration > Scommerce Configuration > Lazy Loading*

## General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module.
- **Preload Images** - Select "Yes" to preload the images.
- **Loading Icon** - Show a preview image before the real image loads.
- **Skip Images Count by page category** - Enter a valid image count to skip the images from lazy load. Based on the count this option will decide how many images to load without lazy loading.
- **Ignore Images that Contain** - Provide a part of an image tag content into the field to exclude the image from the lazy load.
- **Exclude Pages** - Select the page(s) from multi-select options to exclude from the lazy load.

## General Settings

Enabled  
[store view]

Yes

This setting will be used to enable or disable module

Select "Yes" to merge the JavaScript files

Preload Images  
[store view]

Yes

This setting will be used to preload images or load them from scratch when they appear on the screen.

Select "Yes" for Preload Images

Loading Icon  
[store view]

Choose File

No file chosen

Show a preview image before the real image loads.

Please choose the file for Loading Icon

Skip Images Count by page category  
[store view]

Page Type

Skip Count

       Stores > Configuration > Scommerce Configuration > Image Optimizer

## General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module.
- **Compress Images while uploading** - Select available options to enable compression for new images uploaded via Magento admin. We recommend this to be enabled because all the new things will be compressed straight away.
- **Number of images to processed** - Define how many number of images you want to process when the cron job runs. Please note this number should be reasonable especially when you have multiple stores and many additional product images.
- **Minimum image size required after optimisation** -
- **Include folders** - Please select list of folders you want to include for compressing the image.
- **Compress Cached Product Images (Yes/No)** - Select "Yes" to compress cached product images generated by Magento. We could recommend to leave this setting turned off especially when you clear your cached images frequently and you have more than 5 additional images on the product page.
- **Image Compression Provider** - Please select image compression provider. **Provider API URL: Provider API URL. smush it** - <http://api.resmush.it/ws.php?img=>  
**imageoptim** - <https://im2.io/{username}/full/> **kraken.io** - <https://api.kraken.io/v1/url>
- **API Key** - Please enter API Key (if provider is kraken.io).
- **API Secret Key** - This will be required for certain providers like kraken.io
- **Exclude folders** - Please enter the list of folders you want to exclude from media directory (comma separated) for example foldername1, foldername2, /foldername/subfolder1, foldername/subfolder2
- **Backup Images (Yes/No)** - Select "Yes" to enable this feature to backup original images before compressing original file.
- **Debugging (Yes/No)** - Select "Yes" to enable debugging. This will write logs in var - log - imageoptimize.log
- **Image Optimiser Schedule** - Please define the Cron frequency to optimize images.

## General Settings

**Enabled** [store view] Yes

This setting will be used to enable or disable module

Select "Yes" to enable the module

**Compress Images while uploading** [store view]

Please select  
CMS  
Product  
Category

This setting will be used to enable compression for new images as soon as they are uploaded via Magento admin

Please select the compress image while uploading

**Number of images to processed** [store view]

100

This setting will be used to define how many number of images you want to process when the cron job runs. **Please note this number should be reasonable especially when you have multiple stores and many additional product images**

Please add the number of images to processed

**Minimum image size required after optimisation**

10000

This setting will be used to make sure you have minimum file size after optimisation of your image. This will be in bytes and our minimum recommendation is 10000 bytes which is equal to 10kb

Please add the Minimum image size required after optimisation

**Include folders** [store view]

Please Select  
custom\_options  
customer  
theme\_customization  
theme  
captcha  
analytics  
catalog  
wysiwyg  
tmp

This setting will be used to include list of folders you want to include for compressing the images

Please select the Include Folders

**Compress Cached Product Images** [store view]

No

This setting will be used to further compress cached product images generated by Magento. **We would recommend to leave this setting turned off especially when you clear your cached images frequently and you have more than 5 additional images on the product page.**

Select "Yes" for Compress Cached Product Images

**Image Compression Provider** [store view]  ⌵ → **Please add the image compression provider**

This setting will be used to define which image compression provider should be used

**Provider API URL** [store view]  → **Please add the Provider API URL**

This setting will be used to define API uri for your image compression provider as shown below  
 Resmush.it - <http://api.resmush.it/ws.php?img=>  
 ImageOptim - <https://im2.io/{username}/full/>  
 Kraken.io - <https://api.kraken.io/v1/url>

**API Key** [store view]  → **Please add the API Key**

API Key (This setting will be required for certain providers like [Kraken.io](#))

**API Secret Key** [store view]  → **Please add the API Secret Key**

This setting will be required for certain providers like [Kraken.io](#)

**Exclude folders** [store view]  → **Please add the Exclude folders for compressing**

This setting will be used to exclude list of folders you want to exclude for compressing the images from media directory (comma separated)  
**for example foldername1, foldername2, /foldername/subfolder1, foldername/subfolder2**

**Backup Images** [store view]  ⌵ → **Select "Yes" to Backup the image before compression**

This setting will be used to enable backup original images before compression

**Debugging** [store view]  ⌵ → **Select "Yes" for Debugging**

This setting will be used to log information to the log file under `/var/log/image_optimiser-yyyymmdd.log`

**Image Optimiser Schedule** [store view]  → **Please add the image optimiser schedule for Cron**

This setting will be used to allow you to define schedule how often you want to optimise images

```

* * * * *

## Configuration Settings for Cache Warmer

Go to *Admin > Stores > Configuration > Scommerce Configuration > Cache Warmer*

### General Settings

- **Enabled** - Select "Yes" or "No" to enable or disable the module

- **Regenerate cache after page update** - Please select "Yes" or "No" to regenerate cache for updated page.
- **Select Page** - Please select the page(s) from the multi-select option. This will regenerate the cache selected page(s) on page update.
- **Can Regenerate Cache Manually** - Please select " Yes" or "No". If set to "Yes" then you can regenerate cache manually from cache warmer grid.
- **Generate Log** - Select "Yes" to generate the log.

### General Settings

**Enabled** [store view] Yes  Select "Yes" to enable the module.  
 This setting will enable or disable the module.

**Regenerate cache after page update** [store view] Yes  Select "Yes" to regenerate cache on page update.  
 This setting will automatically regenerate cache on page update.

**Select Pages** [store view]  
 Product Pages  
 Category Pages  
 CMS Pages  
 Select pages(s) to regenerate cache on page update.  
 This setting will regenerate cache for selected page(s) on page update.

**Can Regenerate Cache Manually** [store view] Yes  Select "Yes" to regenerate cache manually.  
 Select "Yes" to regenerate the cache manually.

**Generate Log** [store view] Yes  Select "Yes" to generate the log.  
 This setting will be used to generate log file.

## Cron Settings

- **Cache Cron Schedule** - Schedule cron job to regenerate the cache for all non cached page(s).
- **Number of Concurrent Regeneration request** - Please define the number of concurrent request.

## Cron Settings

Cache Cron Schedule  
[store view]

+ / 15 \* \* \* \*

This setting will allow to add cron expression to generate the cache for all non cached pages.

\* \* \* \* \*

| | | | |

| | | | +---- Day of the Week (range: 1-7)

| | | +----- Month of the Year (range: 1-12)

| | +----- Day of the Month (range: 1-31)

| +----- Hour (range: 0-23)

+----- Minute (range: 0-59)

Example: 0 0 \* \* \* Daily at midnight

Schedule the **cron** job to generate the cache for **non cached pages**

Number of Concurrent  
Regeneration request

100

In a single request it will process defined number of chunks (100) to regenerate the cache.

Define number of concurrent regeneration request

## Cache Warmer Grid

When you enable the module and set *General Settings > Can Regenerate Cache Manually > to "Yes"* then it adds an additional option "Regenerate" under the "Actions ->Select" drop-down at *Admin > System > Cache Warmer > Actions*. This grid will have Id, Page URL, Page Type - (Home, Product, Category, CMS), Status - (Cached/Un-cached), Last Cached - (Date, Time), and Action- (Regenerate, Delete).

## Console Commands

You can regenerate cache for Product/Category/CMS page(s) by running the following console commands: -

- **Category Page** - If you want to regenerate cache for the category page then run this command `scommerce:cachewarmer:category`

```
[nurissco@sipuk2-11 html]$ php bin/magento sccommerce:cachewarmer:category
Category page cache process has been finished.
[nurissco@sipuk2-11 html]$ █
```

- **Product Page** - To regenerate cache for the product page(s), use this command `scommerce:cachewarmer:product`

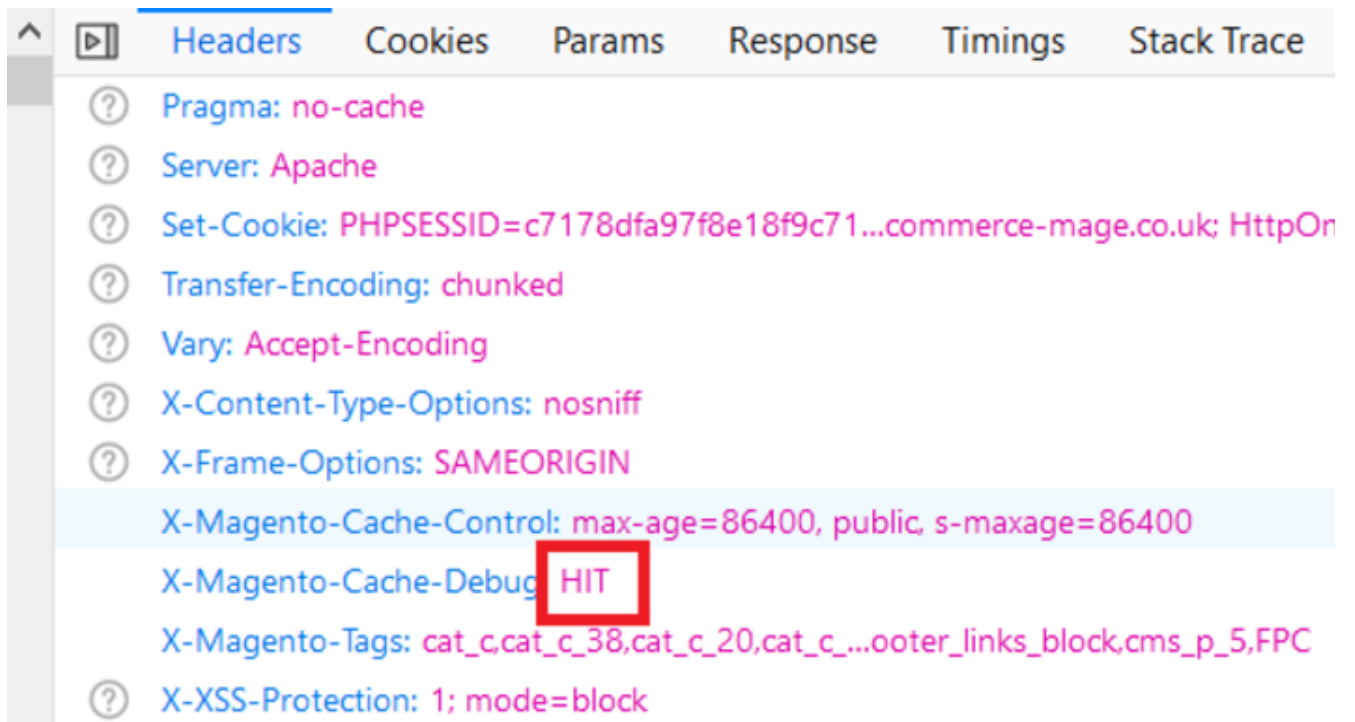

```
full_page
config_webservice
translate
vertex
[nurissco@sipuk2-11 html]$ php bin/magento sccommerce:cachewarmer:product
Product page cache process has been finished.
[nurissco@sipuk2-11 html]$ █
```

- **CMS Page** - To regenerate cache for CMS page please use this command `scommerce:cachewarmer:cmspage`

```
full_page
config_webservice
translate
vertex
[nurissco@sipuk2-11 html]$ php bin/magento sccommerce:cachewarmer:cmspage
Cms page cache has been generated.
[nurissco@sipuk2-11 html]$ █
```

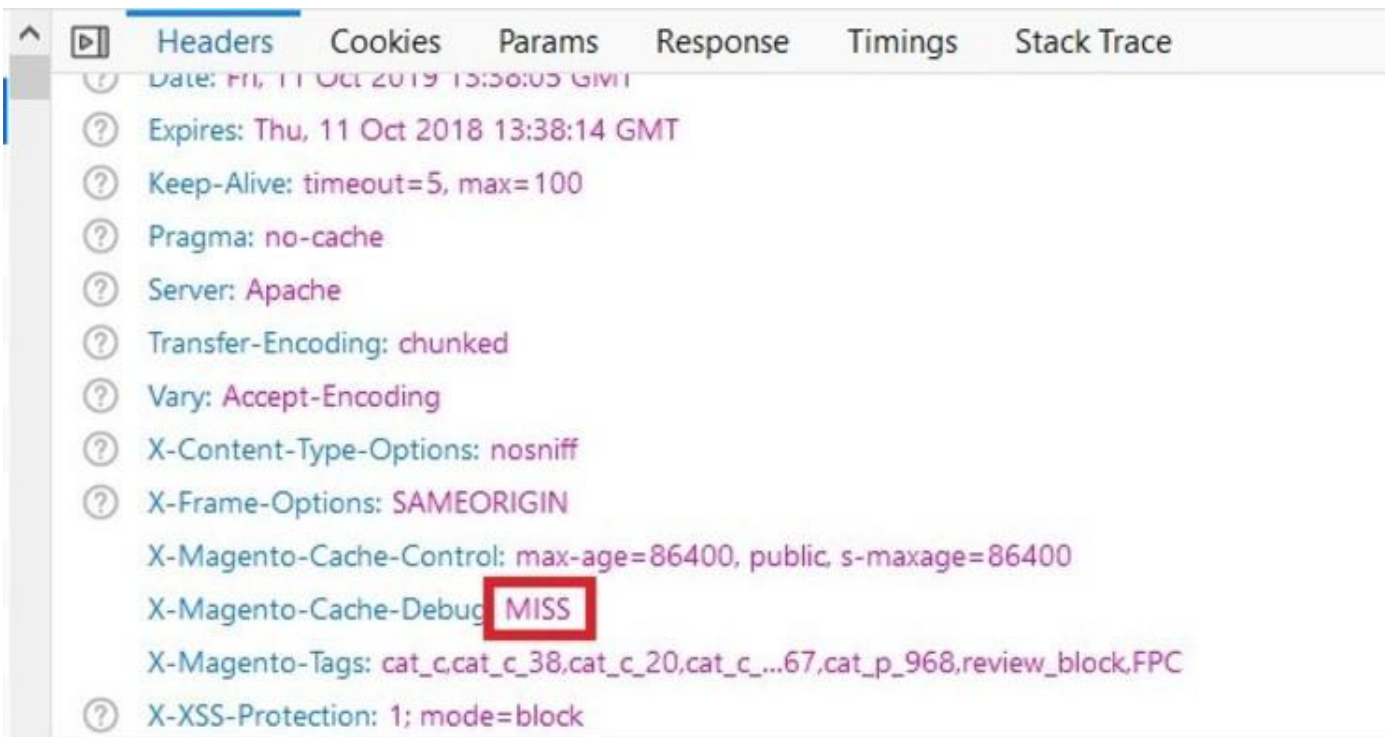

## Front-end Screenshots

- **Cache Hit for the category page after the execution of category page command**
  - When you run the command for category then it regenerates the cache. On the front-end you can debug the cache and check the status "Hit" or "Miss" using browser tool (Inspect element) under *Network > Select Page URL > Header > Cache Debug: HIT*

- **Cache Miss for the Category Page** - Flush the cache by executing the command (**c:f**) and then check cache using browser tool .

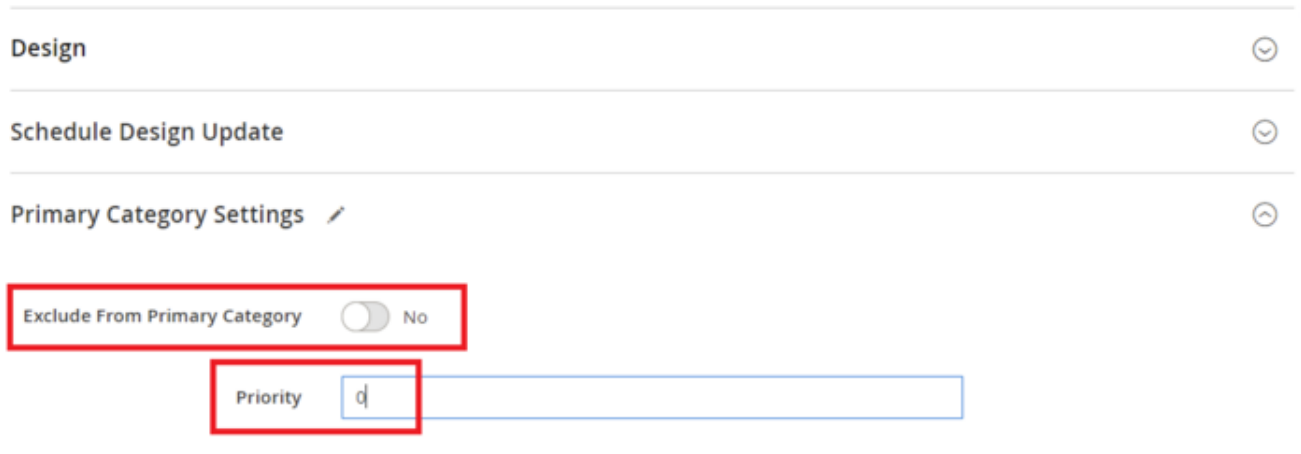

□

## Set Primary Categories

You can use a script provided with the extension to automatically add primary categories for products. Admin can exclude certain categories from primary category and also prioritise one category over the other to be picked as the primary category.

Go to Admin>Catalog>Categories select a category then scroll down to find the option "Primary Category Settings". Here click on "Exclude From Primary Category" to exclude this category from primary category or enter the priority 0 being the highest. The highest priority category will be picked first for the primary category.

The screenshot shows the 'Primary Category Settings' section of an admin interface. It features a toggle switch for 'Exclude From Primary Category' which is currently turned off (labeled 'No'). Below this is a 'Priority' input field containing the number '0'. Red boxes highlight the toggle and the priority input field.

To automatically assign primary category for all products run the command given below by going into the root directory of your store.

```
scommerce:seo-base:set-primary-category
```

**N.B** - If you are using older version then run the script provided in the extension folder at the path `Data/SetPrimaryCategoryM2.php` from ssh
